DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-4 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 1-4 define non-statutory processes because they merely manipulate an abstract idea (mathematical algorithm) without a claimed limitation to a practical application. The disclosed invention has a practical application in the technological arts (e.g encoding/quantizing speech waveforms); however, the claimed process, steps to be performed on a computer, simply manipulates an abstract idea without a claimed limitation to the practical application and does not have any post or pre computer process activity.

Claims 1-4 are directed toward a process that does nothing more than solve a mathematical problem or manipulate abstract idea or concept, and not patentable under 35 USC 101. (See Interim guidelines, Annex 5). A claimed process consisting solely of mathematical operations, i.e., converting one set of numbers into another set of numbers, does not manipulate appropriate subject matter, and thus cannot constitute a statutory process. (See *In re Benson*, 409 U.S. at 71-72, 175 USPQ at 676).

Applicant should note, however, that claims directed to speech or audio signal processing, would be considered to be statutory subject matter. Receiving an input speech signal and using the received input digital speech signal and encoding using strong and weak predictors would constitute pre computer activity.

The disclosed invention of the instant application pertains to an encoding method using strong and weak predictors comprising the step of replacing a strong predictor following a weak predictor with a weak predictor, which is a manipulation of an abstract idea without any limitation to a practical application.

Response to Arguments

3. Applicant's arguments filed 10/30/06 have been fully considered but they are not persuasive. Newly amended claim 1 does not overcome 35 USC 101 rejection. See above. Also when the applicant recites in the claim "spectra vectors" does he mean speech spectral vectors? Even though the applicant amended the claim to include digital speech, the body of the claim language itself does not show or refer to said speech signal as to how that speech signal is being encoded, since the claim is directed to an encoding method of the digital speech signal.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
